

## 700v three-phase inverter

What is a 3 phase PV inverter? A PV inverter for large-scale installation usually comes in three-phase arrangements. The PV inverter combines the output of rows of PV strings in DC and converts them to AC. For example, an inverter can process the output of a PV array with 500 PV modules. Three-phase output rated at 208 V or 480 V is commonly found in commercial PV inverters. What is a three-phase inverter? It combines all the functions of a hybrid inverter, offering a maximum UPS output power of 30kW and the ability to parallel up to 10 units, catering to various scenarios. Additionally, it features a reserved DC charger interface. Choosing our three-phase inverter means choosing reliability and stability for your power needs. Why should you choose a 3 phase inverter?
