

## Canada Suburban Energy Storage Project

Description: This project will assess the potential for carbon storage and de-risk carbon storage targets in Atlantic Canada. Estimates of storage capacity for select targets and long-term fluid flow will be predicted considering containment risks and monitoring. Market Snapshot: Energy storage in Canada may Within Canada, all energy storage projects currently under construction are BESS. Proposed and under-construction projects have a power range between 1 MW and 411 MW, with an average storage Canada's Cache Power advances 30 GWh compressed air Cache Power has commissioned an engineering study for a 640 MW compressed air energy storage and hydrogen project in Alberta, supported by provincial funding. Canada advances energy innovation with major investments in The Honourable Tim Hodgson, Minister of Energy and Natural Resources, announced more than \$11 million toward cutting-edge, made-in-Canada carbon utilization and Ontario is using batteries to help keep energy A new project has been connected to the energy grid in Windsor-Essex that will help keep the lights on whenever there's more demand for power than there is supply. Oneida Battery Project, Canada's Biggest, Goes The Oneida battery project in Ontario. Canada's biggest battery energy storage system went online ahead of schedule and under budget last week, on a patch of industrial land just a few kilometres from Boralex closes financing for Canada's largest The Hagersville Battery Energy Storage park, located in Haldimand County, Ontario, Canada, will be the largest battery energy storage system (BESS) project to date in Canada. The project is Babcock & Wilcox and Cache Power Corp. Announce Initial Babcock& Wilcox announced today that it has been awarded a contract by Cache Power Corp. to execute an engineering study for Cache Power's Marguerite Lake Built to store, powered by partnership - Oneida The storage facility enhances the province's grid by adding capacity and reliability to support the rising demand for energy, and doubling the amount of energy storage resources from 225 MW to 475 MW. Canada's largest battery storage farm just opened - and it's In May, a 10-acre tract of land in Haldimand County officially turned into Canada's largest grid-scale battery storage facility, and one of the largest in the world. The battery that can supercharge Canada's economic future -- To bridge that gap, Canada needs a co-ordinated, nation-building energy storage strategy. The recently completed Oneida Energy Storage Project gives us a model to build on. Market Snapshot: Energy storage in Canada may multiply by Within Canada, all energy storage projects currently under construction are BESS. Proposed and under-construction projects have a power range between 1 MW and 411 MW, Canada's Cache Power advances 30 GWh compressed air storage projectCache Power has commissioned an engineering study for a 640 MW compressed air energy storage and hydrogen project in Alberta, supported by provincial funding. Ontario is using batteries to help keep energy flowing A new project has been connected to the energy grid in Windsor-Essex that will help keep the lights on whenever there's more demand for power than there is supply.
