

Island energy storage charging pile installation

How to install outdoor charging piles? Necessary rain-proof and dust-proof measures should be taken for outdoor charging piles (such as membrane structure canopies).

1. Plan the installation location of charging equipment. It is recommended to install it near the power distribution room. How far should a charging pile be from the charging pile? A distance of at least 1 meter should be left in front and behind the charging pile to ensure sufficient ventilation. At the same time, try to install the device under a canopy to avoid direct sunlight and rainwater erosion from affecting the life and performance of the device.

Where should a charging pile be located?

1. Charging piles should not be located in places that are dusty or contain flammable, explosive, and corrosive objects.
2. The charging pile should be installed in a ventilated environment, and the ambient temperature should meet the requirements for normal charging of electric vehicles.

3. How to choose a charging pile? The layout of charging piles should be convenient for vehicle charging, and the cable length of charging piles should be shortened.
4. The grounding resistance of the charging pile protective ground terminal is less than 4Ω.
5. What is charging and storage? For the purpose of Section .17, charging and storage covers the operation where mobile energy storage systems are charged and stored so they are ready for deployment to another site, and where they are charged and stored after a deployment.

.17.2 Deployment. In , New York passed the nation-leading Climate Leadership and Community Protection Act (Climate Act), which codified some of the most aggressive energy and climate goals in the country.
