Can You ship lithium hydride batteries internationally? While not as strictly regulated as lithium batteries, there are still guidelines to follow when shipping dry cell and nickel-metal hydride batteries internationally. The safest way to ship batteries is within the device they power. Ensure terminals are protected (e.g., with tape or caps) and pack the device to prevent accidental activation. Are lithium batteries safe to ship? Improperly packaged lithium batteries can ignite, causing fires that are difficult to extinguish and pose a significant risk to the safety of transportation workers and the general public. Other battery types, such as alkaline or nickel-metal hydride (NiMH), are generally considered safer to ship. How do I ship a lithium battery? If you're shipping lithium batteries alone: Each battery must be individually packaged in inner packaging to prevent short circuits. Place batteries in a rigid outer packaging, ensuring they cannot move or come into contact with each other. Use cushioning material to fill any empty spaces within the packaging. How do you package a lithium battery? Place the battery in inner packaging (e.g., a sealed plastic bag) to prevent short circuits. Secure the battery to the equipment or within the packaging to prevent movement. If you're shipping lithium batteries alone: Each battery must be individually packaged in inner packaging to prevent short circuits. Do I need a pre-approval for a lithium battery shipment? The pre-approval requirement applies to lithium metal battery shipments that are fully regulated and require dangerous goods shipping papers. Fully regulated shipments will also require a separate UPS Dangerous Goods Agreement. Are lithium ion batteries dangerous? Though widely used, lithium ion and lithium polymer batteries are classified as Dangerous Goods by the International Air Transport Association (IATA) as they're highly flammable, react sensitively to environmental factors, and can cause fires if damaged.
