Solar On-site Energy Management

How can on-site solar PV & energy storage improve sustainability?To achieve sustainability goals while meeting the increasing electricity demands of electrification, organizations are pairing on-site solar PV generation with on-site energy storage. These systems, which are considered as "behind-the-meter" (BTM) systems, allow facilities to maximize the benefits of on-site renewable generation. What are the benefits of an on-site solar PV system?For the scenario represented in the graph, an on-site solar PV system allows the facility to reduce the amount of electricity drawn from the grid during the middle of the day. Increasing the amount of solar PV production on-site can provide additional cost and emission reductions and resiliency benefits for facilities. Can on-site storage be used alongside solar PV?If a utility restricts the exports from a facility to the grid, the use of on-site storage alongside solar PV can provide a solution to avoid costly infrastructure upgrades, thus increasing the feasibility of larger on-site PV installations. Should solar PV production be reduced on-site?Increasing the amount of solar PV production on-site can provide additional cost and emission reductions and resiliency benefits for facilities. However, the additional generation that can result from larger systems during peak daylight hours must be exported or managed through curtailment on-site. What is a home energy management system?Home Energy Management System (HEMS), Integrated Energy Management System (IEMS), Smart Energy Management System (SEMS) or Centralized Energy Management System (CEMS) are synonymous with EMS and are classified as systems that optimize SSM and DSM techniques to facilitate the production and use of reliable and cost-effective energy. Is solar power a good option for your business?With its costs declining and technology advancing, more organizations are turning to solar as a leading option for power generation. As an expert in on-site generation, Siemens can help you implement a stand-alone or hybrid solar power solution designed to support your goals now and into the future. Onsite energy solutions for businesses--optimize usage, cut costs, and boost resilience with behind-the-meter solar generation, battery storage, and management.
