

There are several types of solar power station inverters

To recap, there are three kinds of inverters: string inverters, microinverters, and power optimizers. They all transform the power your solar panels generate from direct current (DC) to alternating current (AC). This makes the energy usable for your home. Basically, inverters are devices that convert the direct current (DC) to alternating current (AC) so that it can be used by appliances. Normal inverters use direct current from their batteries, but solar inverters are a bit different. They receive direct current from solar panels that convert solar
